

Sustainable is Attainable

South Canterbury & Hawke's Bay

“Don't let an opportunity go to waste”

A collaborative approach to sustainable waste & by-product management within the food processing and manufacturing industry

STEP 1: UNDERSTAND THE ISSUE

Collate information on waste & by-product output:

- *What is it?*
- *What's in it?*
- *How much of it is there?*
- *Where are there shared waste/by-product streams between businesses?*
- *What are we doing with it?*
- *What have we heard of that we could do with it?*

STEP 2: FIND SOLUTIONS

Engage research & development and university resources to investigate sustainable opportunities and global best practices associated with:

- *Prevention and minimisation*
- *Value extraction*
- *Energy recovery*
- *Alternative uses*
- *Environmentally friendly disposal methods*
